

Demand Setu — Website Project Handoff Document

Project: Demand Setu Travel & Stays Website
Stack: Next.js 16 (App Router) · React 19 · Tailwind CSS v4 · Redux Toolkit
Backend API: `https://packagemakerbackend.demandsetutours.com`
Last updated: June 2026

1. Executive Summary

This is a full-stack **hotel & homestay booking website** for Demand Setu Tours. Users can search stays by city/state, browse listings, view property details with live inventory pricing, select rooms (including multi-category combos), checkout, pay via Razorpay, and manage bookings. The site supports both **live API hotels** (Packagemaker) and **static demo listings** for development/fallback.

Primary user journey:
Home → Search → Listings → Property → Room Selection → Checkout → Payment → My Bookings

2. Tech Stack

Layer	Technology
Framework	Next.js 16.2.6 (App Router)
UI	React 19, Tailwind CSS v4
State	Redux (location catalog), React Context (room selection, booking gate)
Session	<code>sessionStorage</code> / <code>localStorage</code> for trip search, room selection, guest auth
Payments	Razorpay (via backend <code>api/razorpay-demand/*</code>)
Email	Backend <code>api/webmail/send-demand</code>
WhatsApp	Backend <code>api/whatsapp/send-template</code>
Fonts	Plus Jakarta Sans

Note: No `.env` files are used today — API base URL and support contacts are hardcoded in `src/lib/apiConfig.js` and related libs.

3. Site Map & Routes

SEO-friendly routes (canonical)

URL Pattern	Page	File
<code>/</code>	Home	<code>src/app/page.js</code>
<code>/hotels/manali</code>	Listings (category + location)	<code>src/app/[category]/[location]/page.js</code>

/hotels/manali/grand-himalayan-resort	Property detail	src/app/[category]/[location]/[property]/page.js
/hotels/manali/grand-himalayan-resort/book	Checkout	src/app/[category]/[location]/[property]/book/page.js

Category URL segments: stays , hotels , airbnb , villas / homestay

Query params: checkIn , checkOut , adults , children , rooms , childAges , filters (price , stars , amenities , sort)

Legacy redirects (preserve query string)

Old URL	Redirects to
/listings?...	SEO slug listings URL
/property/[slug]	SEO property URL
/property/[slug]/book	SEO book URL

Auth & account

URL	Purpose
/signin	Guest login (mobile + password)
/signup	Redirects to /signin
/my-bookings	View bookings, pay pending, resend email
/admin/properties	Stub (placeholder only)

4. Page-by-Page Features

4.1 Home Page (/)

- **Hero search bar** — city/state, dates, guests & rooms → navigates to listings
- **Booking gate** — property cards require search dates before opening property page
- **Category showcase** — Hotels, Airbnb, Villas with explore modal
- **Destination states** — browse Himachal and other states
- **API-driven sections** — Guest Favourites, Popular This Week (from Packagemaker API, Himachal Pradesh default)
- **Static fallback** — mock listings when API unavailable
- **Trust sections** — testimonials, marquee, promo CTAs

Key files: src/app/page.js , src/components/SearchBar.js , src/components/BookingGateProvider.js , src/lib/homePageListings.js

4.2 Listings Page (/[category]/[location])

- **Hero search** — edit trip (location, dates, guests) inline
- **Category pills** — filter by stay type
- **API listings** — live hotels when city/state in URL (ApiListingsResults)

- **Static listings** — mock data when no location filter
- **Filters** — price range, star rating, amenities, sort
- **SEO content** — CMS-driven blocks (about, FAQ, highlights, schema JSON-LD)
- **Trip hydrator** — syncs session search to URL

Key files: `src/app/listings/ListingsPageView.js` , `src/components/listings/*` ,
`src/lib/seoListingApi.js` , `src/components/listings/ListingsSeoContent.js`

4.3 Property / Product Page (`/[category]/[location]/[property]`)

- **Gallery** — image carousel with lightbox
- **Breadcrumb & nav tabs** — Overview, Rooms, About, Location, Reviews
- **Room selection (inventory)** — meal plans EP / CP / MAP / AP with live B2C rates
- **Multi-room pricing** — GST 5%, extra adult charges, per-night breakdown
- **Room combo mode** — when one category cannot fulfil search room count, auto-suggest combo across categories (e.g. 5× Deluxe + 1× Super Deluxe)
- **Customize your room** — per-room guest assignment across categories; combo and customize are **mutually exclusive** (switching clears the other on Confirm / combo select)
- **Booking card (sidebar)** — sticky price summary + Reserve CTA
- **Mobile booking bar** — fixed bottom bar on mobile
- **Header search** — compact search bar on property pages
- **Policies & amenities** — from API or static data
- **Similar hotels** — static listings only

Key files: `src/app/property/PropertyPageView.js` , `src/components/property/*` ,
`src/contexts/PropertyRoomSelectionContext.jsx` , `src/lib/propertyInventory.js`

4.4 Checkout Page (`/book`)

- **Guest details form** — name, email, mobile, special requests
- **Price breakdown** — line items from room selection or standard nightly rate
- **Payment options:**
 - **Pay now** — Razorpay online payment
 - **Pay at property** — booking saved without charge
- **Member sign-in discount** — 10% when opted in at checkout
- **Inventory vs standard** — inventory bookings use saved room line items; standard uses `price` `query` param
- **Post-booking** — confirmation email + WhatsApp notification

Key files: `src/app/[category]/[location]/[property]/book/page.js` ,
`src/components/booking/BookingCheckoutForm.js` , `src/lib/checkoutPayload.js`

4.5 My Bookings (`/my-bookings`)

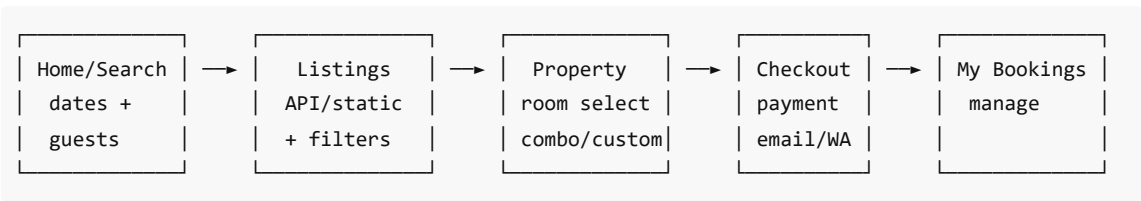

- Guest login required (mobile + password)
- List bookings from API by mobile number
- **Pay now** for pending / partially paid bookings (Razorpay)
- Resend confirmation email
- Payment WhatsApp trigger

Key files: `src/app/my-bookings/page.js` , `src/components/booking/MyBookingsClient.js`

4.6 Sign In (/signin)

- Guest login via `api/inventorybooking/guest-login`
- Session: `sessionStorage` (session) or `localStorage` (keep signed in)
- New guests can set password at checkout (sent in confirmation email)

5. Booking Flow (End-to-End)

1. User sets **city/state, check-in/out, guests & rooms** on home or listings hero
2. Trip saved to `sessionStorage` (`demand_setu_booking`) and reflected in URL
3. Listings show matching hotels (API or static)
4. Property page loads hotel detail + **inventory B2C** rates per room category
5. User selects rooms → saved to `sessionStorage` (`demand_setu_room_selection`)
6. **Reserve** → navigates to `/book` with pricing query params
7. Checkout creates booking via `POST api/inventorybooking/create`
8. Optional Razorpay payment → verify → update booking status
9. Confirmation **email** + **WhatsApp** sent
10. Guest manages bookings at `/my-bookings`

6. Room Selection & Inventory Logic

Meal plans

Code	Label
EP	Room Only
CP	Room with Breakfast
MAP	Breakfast + Lunch/Dinner
AP	All Meals

Modes

Mode	When	Behaviour
Single category	Search rooms ≤ category availability	Pick room count per meal plan in one category
Combo	Search rooms > one category's availability	Auto-allocate across categories (e.g. 5 Deluxe + 1 Super Deluxe)
Customize	Combo scenario active	User picks each room slot with adults/child per room

Business rules implemented

- **Max 3 guests per room:** child ≤ 7 counts as young child; child > 7 counts as adult
- **Max 9 rooms** bookable online (`MAX_SELF_SERVICE_SEARCH_ROOMS`); **10+ rooms** → bulk enquiry form (mailto to `info@demandsetutours.com`)
- **Bulk enquiry triggers:** guest picker above 9 rooms; property page Confirm when total would exceed 9
- **Combo vs customize:** mutually exclusive — selecting combo clears customize; customize Proceed clears combo
- **Combo "Confirmed" UI:** only shown on the **primary** category (highest room count), not secondary filler categories
- **Guest sync:** room selection updates URL guest params when selection changes

Key libraries

- `src/lib/propertyInventory.js` — pricing, availability, combo allocation, line items
- `src/lib/guestOccupancy.js` — occupancy rules, min rooms, child ages
- `src/contexts/PropertyRoomSelectionContext.jsx` — selection state provider
- `src/lib/propertyBookingSave.js` — save selection + navigate to book
- `src/lib/roomSelectionStorage.js` — session persistence

7. API Integrations

Base URL: `https://packagemakerbackend.demandsetutours.com` (`src/lib/apiConfig.js`)

Hotels (Packagemaker)

Endpoint	Use
GET <code>.../get-packagemaker-hotels-by-state/:state</code>	Home, state listings
GET <code>.../get-packagemaker-hotels-by-city-pi/:city</code>	City listings
GET <code>.../get-packagemaker-by-id/:id</code>	Single property
GET <code>.../get-packagemaker-hotel-cities</code>	Location autocomplete
GET <code>.../get-packagemaker-hotel-states</code>	State list

Inventory booking

Endpoint	Use
POST <code>api/inventorybooking/create</code>	Create booking at checkout
POST <code>api/inventorybooking/guest-login</code>	Guest sign-in
GET <code>api/inventorybooking/get-by-mobile/:mobile</code>	My bookings

Payment (Razorpay)

Endpoint	Use
POST <code>api/razorpay-demand/order</code>	Create payment order

POST <code>api/razorpay-demand/verify</code>	Verify payment signature
--	--------------------------

Notifications

Endpoint	Use
POST <code>api/webmail/send-demand</code>	Booking confirmation email
POST <code>api/whatsapp/send-template</code>	Booking welcome + payment confirm

SEO CMS

Endpoint	Use
GET <code>api/seo-listing/:category/:locationType/:location</code>	Listings page SEO content

8. Email & Notifications

Booking confirmation email

- **Built in JS** (`src/lib/bookingEmail.js`) — HTML + plain text templates
- Includes: property name, stay dates, room breakdown, guest details, payment summary (total / paid / due)
- Subjects:
 - Paid online: `Payment Received · Booking Confirmed · {property}`
 - Pay at property: `Booking Confirmed · {property}`
- Support contact in footer: `+91 8353056000` , `info@demandsetutours.com`

WhatsApp templates

- `website_static_template` — booking welcome
- `payment_confirm` — payment confirmation

Bulk stay enquiry

- **No API** — opens `mailto:info@demandsetutours.com` with prefilled body
- Component: `src/components/booking/BulkStayEnquiryForm.jsx`

9. Payment Flow

1. User chooses **Pay now** or **Pay at property** at checkout
2. **Pay now:** `createDemandOrder` → Razorpay checkout modal → `verifyDemandPayment`
3. Currency: **INR**; theme: brand orange `#ea580c`
4. **GST:** 5% on subtotal
5. **Member discount:** 10% when member sign-in checked at checkout
6. **My Bookings:** pending bookings can be paid later via same Razorpay flow
7. Footer shows payment method logos (`PaymentLogos.js`)

10. SEO

Listings SEO (`ListingsSeoContent.js`)

- CMS-driven: heading, about destination, highlights, best time to visit, how to reach, travel tips, FAQ accordion, tags, images
- HTML sanitized via `prepareSeoHtml`

Structured data (`ListingsSeoSchema.js`)

- `FAQPage` schema when FAQs enabled
- `TouristDestination` (or custom `schemaType`) when page schema enabled

Metadata

- Dynamic `generateMetadata` on listings and property pages
- Property: title `{Hotel Name} | Demand Setu`

11. State & Session Storage

Key	Storage	Contents
<code>demand_setu_booking</code>	<code>sessionStorage</code>	Trip: category, city, state, dates, guests
<code>demand_setu_room_selection</code>	<code>sessionStorage</code>	Property room line items, pricing, dates
<code>demand_setu_guest_session</code>	<code>sessionStorage</code>	Guest auth (session)
<code>demand_setu_guest_persistent</code>	<code>localStorage</code>	Guest auth (keep signed in)

Custom event: `demand-setu-trip-search-updated` — syncs trip across components (`useTripSearch` hook)

12. Guest Occupancy Rules

Rule	Value
Max guests per room	3
Max young children (≤ 7) per room	1
Child > 7 years	Counts as adult
Max rooms in picker	30
Max self-service online	9 (10+ → bulk enquiry)
Default child age	5

13. Scripts & Templates (Non-App)

File	Purpose
<code>scripts/proposal-template.html</code>	Standalone A4 printable travel proposal template (~1500 lines) — e.g. Spiti Valley itinerary, pricing, terms
<code>Spiti_Valley_Travel_Proposal.pdf</code>	Sample generated proposal PDF

These are **not wired into the Next.js app** — sales/reference assets.

14. Component Architecture (High Level)

```
layout.js
├─ Header (nav, explore modal, property search)
├─ main
│   └─ [page content]
├─ Footer (links, payment logos)
└─ MobileNav

Property page:
PropertyPageView
├─ PropertyTripHydrator
├─ PropertyGallery
└─ PropertyBookingShell
    └─ PropertyRoomSelectionProvider
        ├── PropertyRooms (meal plans, combo, customize)
        ├── PropertyBookingCard (sidebar)
        └─ PropertyMobileBar (mobile CTA)
```

15. Recent Fixes & Improvements (This Sprint)

Area	Fix
React console error	PropertyRoomSelectionProvider was calling persistTripSearch inside setState updaters during render, updating HeaderSearchBarClient. Moved guest sync to useEffect; deferred trip update events via queueMicrotask.
Combo + customize conflict	Both could stack (10+ rooms, unreducible). Made mutually exclusive: combo select clears customize; customize Proceed clears combo.
Wrong combo "Confirmed" on wrong category	Deluxe showed confirmed when Family combo was selected. Fixed isComboActiveForPrimary to use highest room-count category as primary, not list order.
10+ rooms across categories	User could confirm 5 rooms in category A + 5 in category B = 10 total. On Confirm, if total > 9 → BulkStayEnquiryForm opens; selection not saved.

16. Known Limitations & Future Work

- **No environment variables** — API URL and contacts are hardcoded; recommend `NEXT_PUBLIC_API_BASE_URL` for staging/production
- `/signup` redirects to signin — no separate registration flow
- `/admin/properties` is a stub — no property CRUD in frontend
- **Search analytics** — console logging only, no analytics SDK
- **Dual data sources** — static mock listings + live API; resolution logic in `src/lib/propertyData.js`
- **Some API paths** use double slash (`api/packagemaker//get-...`) — matches deployed backend

17. How to Run

```
npm install
npm run dev      # http://localhost:3000
npm run build    # production build
npm run start    # production server
```

Image domains configured in `next.config.mjs` for Unsplash, Pexels, Firebase, Google, demandsetutours.com.

18. Key File Index

Area	Path
Home	<code>src/app/page.js</code>
Listings view	<code>src/app/listings/ListingsPageView.js</code>
Property view	<code>src/app/property/PropertyPageView.js</code>
Checkout	<code>src/app/[category]/[location]/[property]/book/page.js</code>
Trip / URL search	<code>src/lib/bookingSearch.js</code>
Inventory & pricing	<code>src/lib/propertyInventory.js</code>
Room selection context	<code>src/contexts/PropertyRoomSelectionContext.jsx</code>
Checkout form	<code>src/components/booking/BookingCheckoutForm.js</code>
Razorpay	<code>src/lib/razorpayDemandApi.js</code>
Email templates	<code>src/lib/bookingEmail.js</code>
WhatsApp	<code>src/lib/whatsappApi.js</code>
SEO API	<code>src/lib/seoListingApi.js</code>
Hotel API	<code>src/lib/hotelListingsApi.js</code>
Booking API	<code>src/lib/inventoryBookingApi.js</code>
Guest rules	<code>src/lib/guestOccupancy.js</code>
Bulk enquiry	<code>src/components/booking/BulkStayEnquiryForm.jsx</code>

19. Support & Brand Contacts (Hardcoded)

- **Email:** info@demandsetutours.com
- **Phone:** +91 8353056000
- **Brand color:** Orange (`#ea580c` / `brand` in Tailwind)

Document prepared for internal handoff. For questions on booking logic or API contracts, refer to backend team at Packagemaker / Demand Setu backend.
